EDUCATION

University of North Carolina at Charlotte, College of Computing and Informatics
B.S. in Computer Science, Software, Systems, and Networks
Charlotte, NC
August 2025
Relevant Coursework: Data Structures & Algorithms, Distributed Computing, Operating Systems, Database Systems, Computer Networks, Software Engineering, Cloud Computing, Information Security & Privacy

TECHNICAL SKILLS

Languages: Python, SQL, C#, JavaScript, TypeScript, R
Data Engineering: PySpark, DuckDB, dbt, Azure Databricks, Delta Lake, Azure Data Factory
ML & Analytics: MLflow, Vertex AI, Scikit-learn, Qdrant, Pandas, PowerBI
DevOps & Cloud: Azure, GCP, Docker, Kubernetes, Git, GitHub Actions, Jenkins, CI/CD
Orchestration & Tools: Apache Airflow, FastAPI, PostgreSQL, REST APIs, Jira, Grafana, Nextthink

PROFESSIONAL EXPERIENCE

Varsinix Raleigh, NC
Data Engineer August 2025 – Present

- Engineered a scalable ingestion pipeline on GCP using Vertex AI and Python to process 3 million+ clinical notes, enforcing schema validation for entity extraction.
- Implemented a Medallion Architecture on Azure Data Lake, standardizing data lineage and reducing schema drift by 45%.
- Refactored Qdrant vector search logic using Python, reducing neural network evolution failures by 35% and stabilizing retrieval outputs.
- Collaborated within an Agile team to build a reproducible pipeline, improving Recall@K reliability by 30% across more than 2 million samples.

First Citizens Bank Raleigh, NC
Systems Engineer Intern May 2025 – August 2025

- Designed Power BI dashboards using Nexthink data to monitor 20K+ endpoints, increasing issue detection by 25%.
- Formulated high-performance NQL queries to join and analyze endpoint telemetry, reducing mean time to triage by 35%.
- Automated endpoint remediation with Nexthink Remote Actions, increasing device reliability and IT response speed by 20%.
- Partnered with cross-functional IT teams to enhance digital employee experience (DEX) through Nexthink analytics.

Control Infotech Inc. Raleigh, NC
Cybersecurity Analyst Intern May 2023 – August 2023

- Developed PowerShell and Bash pipelines to ingest Azure resource logs, consolidating data from 3+ monitoring systems.
- Optimized log-processing algorithms using Python and C, increasing data throughput by 35% and detection accuracy by 15%.
- Scripted Python automation scripts for security workflows, reducing the manual workload for vulnerability scans by 30%.
- Standardized security operation by authoring technical runbooks in Jira, reducing new analyst onboarding time by 40%.

PROJECTS

F1Dash, Machine Learning Race Prediction Pipeline Cary, NC
Independent Project — Data Engineer October 2025 – Present

- Engineered an automated airflow ETL pipeline using Python to process 30 million records, reducing data refresh latency by 45%.
- Structured a Duck DB and dbt-based Lakehouse to model 61+ historical racing features, optimizing scikit-learn training workflows and query performance.
- Operationalized random forest models via a Dockerized Python REST API, serving real-time race outcome prediction with sub-100ms latency.

CareSight, Healthcare Analytics Data Platform Charlotte, NC
Independent Project — Data Engineer September 2025 – Present

- Orchestrated high-volume Airflow ETL pipelines, optimizing throughput for 8 million records and cutting latency by 40%.
- Modeled clinical entities in DBT using star schema, improving downstream analytics performance by 35%.
- Architected a RAG-based risk engine using FAISS and FastAPI to analyze unstructured clinical notes, increasing clinician risk detection accuracy by 50%.
